IN THE CLAIMS:

- 1-4. (Canceled)
- 5. (Currently Amended) A method for producing a preparation possessing antiviral activity comprising substances obtained from cuticular or epicuticular layers external to an epidermis of a plant or plant part, the method comprising:
- a) exposing the plant or plant part to a solvent under conditions sufficient to solubilize materials in the cuticular and epicuticular layers of the plant, while leaving cells and tissues internal to the epidermis substantially unaffected;
- b) obtaining a solution or suspension of plant cuticular and epicuticular materials, thereby producing the antiviral preparation; and,
- c) formulating the antiviral preparation with a pharmaceutically acceptable carrier to form a pharmaceutical composition <u>possessing antiviral</u> activity in a form selected from a tablet and a capsule,

wherein the plant or plant part is selected from the group consisting of apple and tomato.

- 6. (Original) The method of claim 5 wherein the solvent comprises one or more ingredients selected from the group consisting of hexane, chloroform, dichloromethane, heptane, ether, petrolether, t-butyl ether, DMSO, supercritical fluids and carbon dioxide.
- 7. (Original) The method of claim 5 wherein the step of exposing comprises dipping the plant or plant part into the solvent.
- 8. (Previously Presented) The method of claim 5 wherein the step of exposing comprises spraying the plant or plant part with the solvent.
 - 9. (Previously Presented) The method of claim 19 wherein the

removal of the solvent is performed by a method selected from the group consisting of aspiration, static evaporation, heating, centrifugal evaporation, rotary evaporation, vortex evaporation, lyophilization, liquid-liquid separation, solid-liquid separation and precipitation.

10. (Previously Presented) A pharmaceutical composition prepared by the method of claim 5.

11-18. (Canceled)

- 19. (Previously Presented) The method according to claim 5 further comprising removing the solvent.
- 20. (Previously Presented) The method according to claim 19 further comprising redissolving the antiviral preparation in a biologically compatible medium.
- 21. (Previously Presented) The method according to claim 5 further comprising clarifying the solution or suspension of plant cuticular and epicuticular materials.

22-33. (Canceled)

- 34. (Previously Presented) The method of claim 5 wherein the plant or plant part is apple.
- 35. (Withdrawn) The method of claim 5 wherein the plant or plant part is tomato.

36. (Canceled)

- 37. (Previously Presented) The method of claim 5 wherein the plant or plant part is exposed to a solvent from about three minutes to about five minutes.
- 38. (Previously Presented) The method of claim 37 wherein the plant or plant part is exposed to a room temperature solvent.

39. (Previously Presented) The method of claim 5 wherein the plant or plant part is fruit peel.
